

Junior Developer Task – Spring Boot

Task Title: Node Registration API

Objective:

Implement a simple REST API in Spring Boot to register monitoring nodes and store them in a database.

Requirements:

1. Create a Spring Boot project.
2. Create an Entity called **Node** with fields: id, nodeName, ipAddress, status, createdAt.
3. Create a REST API:
POST /api/nodes/register
4. Save node details into database using JPA.
5. Return success response after saving.

Technology Stack:

- Java 17
- Spring Boot
- Spring Data JPA
- H2 / MySQL

Deliverables:

- Working Spring Boot project
- API working in Postman
- Code pushed to Git repository

Evaluation Criteria:

- Clean code
- Proper package structure
- API correctness
